NCI CGAP_FTI is a normalized cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The mRNA samples were a mixture of these conditions (times refer to incubations following isolation by bronchoalveolar lavage) (some normal donor macrophages were outlured in some of the conditions). The mRNA samples were pooled for library construction. Control 0 hours; control 3 hours; control 24

LPS 3 hours; At adenovirus + LPS 24 hours; The library was normalized according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into py773-Pac vector. The oligonucleotide used to prime the synthesis of first-errand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCCG. The tissue was provided by Dr. Gary W. /clone lib="Stimulated peripheral blood leukcytes S3"
/notes="Organ: circulatory system, Vector: pME188-FL3;
Site l: Xhol; Site 2: Xhol; The library was prepared from polyh- RNA from equine peripheral blood leukcytes were solated from a healthy adult horse. The leukcytes were stimulated for 4 hr with 10 ng/ml E. coli O55:B5 LPS.
Double-stranded cDNA was cloned unidirectionally into different brail sites of the pME188-FL3 vector (5-prime Drall site is CACCATGTCTG, 3-prime Drall site is
CACCATGTCT). Xhol excises the cDNA insert."
            Library constructed by Dr. Yutaka Suzuki and Dr. Sumlo Sugano in the Human Genome Center. University of Tokyo Institute of Medical Science: tissue and RNA were prepared in the Department of Large Animal Medicine, University of Georgia; sequencing done in the Laboratory for Genomics and Bioinformatics, University of Georgia; Sequence ends have been trimmed to exclude vector and regions Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA. Seq primer: Sug3 (CGACCTGCAGCACA)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in the Human Genome Center, University of Tokyo Institute of Medical Science; tissue and RNA were prepared in the Department of Large Annimal Medicine, University of Georgia; sequencing done in the Laboratory for Genomics and Bioinformatics, University of Georgia. Sequence and shave been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CD466140

/ Clone lib="Unstimulated peripheral blood leukocytes N2"
/ Note="Organ: circulatory system; Vector: pWE18S-FL3;
Site 1: Xhol; Site 2: Xhol; The library was prepared from polyA+ RNA from unstimulated equine peripheral blood leukocytes isolated from a healthy adult horse.
Double-stranded cDNA was cloned unidirectionally into different Draili sites of the pME18S-FL3 vector (5-prime Draili site is CACCATGTG, 3-prime Draili site is CACCATGTG; Xhol excises the cDNA insert."

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center. University of Tokyo Institute of Medical
Science; tissue and RNA were prepared in the Department of Large
Animal Medicalne, University of Georgia; sequencing done in the
Laboratory for Genomics and Bioinformatics, University of Georgia.
Sequence ends have been trimmed to exclude vector and regions below
Phred quality 16. Three-prime sequences are presented as their
reverse complement and have been trimmed to exclude polyA.
Seq primer: Sugs (CTTCTGCTCTAAAAAGCTGCG).

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in

the Human Genome Center, University of Tokyo Institute of Medical

Science, tissue and RNA were prepared in the Department of Large

Animal Medicine, University of Georgia; sequencing done in the

Laboratory for Genomics and Bloinformatics, University of Georgia.

Sequence ends have been trimmed to exclude vector and regions below

Phred quality 16. Three-prime sequences are presented as their

reverse complement and have been trimmed to exclude polyA.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
